He has lectured both nationally and internationally on continuing education courses for colleagues on topics of operative dentistry and prosthodontics. He has numerous journal articles published in peer-reviewed publications.

**Course Synopsis:**

Adhesive dentistry has revolutionized the dental profession over the past few decades. With science and evidence-based information, we have a comprehensive understanding of the interactions between dental materials and the dental substrate. This presentation covers the clinical challenges that are faced every day and how certain decisions impact the result. The importance of dental preparation parameters and adequate choice of adhesive restorative material is critical for predictable outcomes.

**Learning Objectives:**

- \* Learn the latest scientific discoveries of full mouth adhesive rehabilitation.
  
- \* Learn the core values of adhesive dentistry.
  
- \* Understand a review of tooth preparation for ultraconservative approaches.
  
- \* Learn important procedures to improve the success of your porcelain restoration.
